

## Claude Code Pro Tips Reference

A quick reference guide for mastering Claude Code workflow optimization and advanced features.

### Essential CLAUDE.md Structure

- Overview: Brief project description and purpose
- Objectives: Clear goals for Claude to accomplish
- Context: Relevant background and constraints
- Success Criteria: How to measure completion
- Constraints and Boundaries: What Claude cannot do
- File Structure: Key directories and their purposes

### AGENTS.md Purpose and Format

- Documents agent definitions and configurations
- Defines agent name, system prompt, and capabilities
- Lists available hooks and their behaviors
- Specifies required tools and permissions
- Includes example agent workflows and use cases

### Hook Types and Examples

#### PreToolUse Hook:

- Triggered before any tool execution
- Use case: Validate inputs before running expensive operations
- Example: Check file existence before attempting edits

#### PostToolUse Hook:

- Triggered after tool completion
- Use case: Verify tool output and handle errors
- Example: Validate test results after running test suite

### Custom Slash Commands

- Create reusable workflows in AGENTS.md
- Format: Define command name and system prompt
- Use cases: Debug, format code, generate tests

Accessible via /command-name in chat

Share across team by committing AGENTS.md to repo

## Model Switching Tips

### Haiku (Fast):

Use for quick tasks and interactive sessions

Best for debugging and code review

### Sonnet (Balanced):

Default for most coding tasks

Good balance of speed and reasoning

### Opus (Powerful):

Use for complex architecture decisions

Best for multi-file refactoring projects

## Settings Configuration

Permissions: Define what Claude can access

Allowed Tools: Specify which tools are available

Hooks: Configure pre- and post-execution behavior

Model Default: Set preferred model for your project

Custom Rules: Define project-specific constraints

## Parallel Session Management

Run multiple Claude Code sessions simultaneously

Use separate CLAUDE.md per session for context isolation

Leverage worktrees for isolated feature branches

Monitor execution in sidebar for multiple active tasks

## Useful Keyboard Shortcuts and CLI Flags

Toggle fast mode for quicker responses

Start new Claude Code session

Skip pre-commit hooks

Preview changes without applying

Override default model
